

Cert-manager

- It helps to:

1. Set issuer
2. Auto create cert from gateway request
3. Save in kubernetes secret with defined name in gateway.

* Only when gateway wants to reference a Secret in another namespace, Reference Grant is needed.

Cert-manager

-- set crd.enabled: true [cannot create crds * certificate, ciss, iss, etc]

-- set config.gatewayAPI.enabled: true [not able to auto-provision a cert]

Certificate Request

Request: the CSR

Certificate: signed certificate

CA: used to verify.
